Unique kits that can optimize chiral resolution conditions in a day are now available worldwide for purchase!

January 26, 2007, San Jose, California – ChiroSolve Inc., based in San Jose, California recently introduced ChiroSolv® Kits, which offer tremendous time and money savings while identifying optimal crystallization conditions during Chiral Resolution Process called Diastereomeric Crystallization; a leading commercial method used while developing majority of pharmaceutical drugs. The 96 vial high throughput format ChiroSolv® kits enable scientists to screen their racemates against 576 different combinations of resolving agents and solvents in parallel, giving results within 24 hours. Kits can be used to separate enantiomeric mixtures of acids, bases, alcohols, amino acids, aldehydes and ketones. ChiroSolv® kits are now available worldwide through distributor Sigma-Aldrich (Nasdaq: SIAL), a leading \$1.7 billion Life Science and High Technology company.

Besides the kits, ChiroSolve Inc. also offers Chiral Enhancement services. Results are provided in form of specific optical rotations. We moved into our new state-of-the-art facility at San Jose BioCenter; which is equipped with NMR, LC-MS, HPLC in March 2006; and are now set up to work in partnership with customers to develop highly efficient routes to chiral compounds," states Dr. Vaidya. For more information about ChiroSolv® kits or Chiral Enhancement services, please contact ChiroSolve Inc. at (866) 624-4725 or visit our website <http://www.chirosolve.com>.

About San Jose BioCenter (SJBC)

ChiroSolve Inc. is a member of the SJBC. The SJBC is a state of the art facility equipped with wet laboratory and office space that provides world class business and facility services to high potential life science companies. SJBC members have access to an extensive range of products, services and equipment that enables them to grow and scale successful businesses.
